Integrated Networking

Product Catalog

July 2001

Digital Networks is proud to present you with our new product catalog. Profit-minded enterprises tell us they need solutions that support their growing network requirements while protecting their existing investments. Digital Networks offers the ideal solution with a full range of scalable and flexible products that offer innovative capabilities to meet the most daunting LAN/MAN/WAN connectivity demands.

In this edition of the Digital Networks Product Catalog you'll find descriptions, specifications and ordering information for our complete line of backbone, workgroup and wiring closet solutions—solutions that build on our 25-years of network expertise to deliver industry-leading multi-technology solutions for network switching, device connectivity, and management. It is our heritage, and our ongoing commitment, to bring you high-performance, low-cost networking products with the advanced features you need in support of your business applications.

Table of Contents

NEW DNmultilayer 1000 Family	2
NEW DNswitch 224S	4
NEW DNswitch 248	5
NEW DNswitch 800	6
GIGAswitch/FDDI	7
MultiSwitch 900	8
MultiSwitch 924TXG	9
MultiSwitch 916TXG	9
VNswitch 900 Product Family	10
NEW DECswitch 90	11
DEChub 90	12
FDDIcontroller/PCI Adapters	13
DECconnect Systems Interconnect Products	13
NEW DECserver Family	14
clearVISN Management Suite	16
Global DNservices	17

Please take a moment to look at our newest products featured in the front of this catalog. Here you'll find the DNmultilayer 1000 switch family that excels at high-speed LAN/WAN/MAN connectivity, layer 2-4 switch routing and unique features such as Appletalk routing in hardware. Next you'll find the DNswitch family of stackable and standalone 10/100 and Gigabit Ethernet switching for workgroups that excels at networking features and connectivity options, price per port, integrated management and lifetime warranty.

Next in this catalog we highlight the popular award-winning DIGITAL-branded products such as the MultiSwitch 900, GIGAswitch/FDDI, VNswitch 900, DEChub 90, DECserver, and *clear*VISN device management software. Here you'll see that in addition to continuing to support your needs with existing products we have developed new members of these product families. New products include the DECswitch 90 that increases the performance of your DEChub 90 products by more than 10-fold and the DECserver 732 that offers higher density and lower cost for environments that need to connect asynchronous devices to the Internet (console port concentration etc.) Exactly what you'd expect from the leading supplier of these products in the industry!

Above all, we strive to ensure your complete satisfaction with our products and services. Please share your comments and questions with us by sending e-mail to digitalproducts@digitalnetworks.net or call us on the Digital Networks Hotline:

Sincerely yours,
Your Digital Networks Team

DNmultilayer™ 1000 Family NEW

High-speed LAN/MAN/WAN convergence based on Layer 2/3/4 switching

The DNmultilayer 1000 family provides high-speed switched network connectivity within a campus or local area network (LAN), a metropolitan area network (MAN), or a wide-area network (WAN). These versatile switches feature wire-speed IP, IPX, and AppleTalk routing within a LAN/MAN, along with IP WAN links over ATM OC-3 or V.35/X.21. Unique OC-48 links to the metropolitan area are ideal for transparent LAN services and MAN backbones, providing transport for any Ethernet-compatible data including VLANs—they are not limited to just IP or routable traffic. The OC-48-Ports support dark fiber up to 80 km, as well as WDM systems, so users can easily establish 2.5 Gbps backbone network connections between switches over any distance.

Features & Benefits

DNmultilayer 1800

- 12-Slot chassis with redundant AC or DC power supplies and fans
- 8-Slots for network interface modules
- 4-Slots for primary and redundant management and switching modules
- 24 Mpps forwarding capability
- Supports up to 128 Fast Ethernet or 48 Gigabit Ethernet ports
- LAN/MAN interface modules support 1 OC-48 SONET, 6 1000BASE-T, 2 and 6 1000BASE-SX/LX, 16 10/100BASE-TX, or 8 100BASE-FX ports per slot
- WAN interface modules support 1 ATM OC-3 or 4 V.35/X.21 ports per slot
- Full redundancy of all components for maximum reliability
- Full wire-speed IP, IPX, and AppleTalk routing
- Full wire-speed Layer 2/3/4 switching
- Complete IP Multicast routing support
- Full wire-speed Layer 3/4 filtering

ATTRIBUTES	DESCRIPTION
Full Wire-Speed Performance	Layer 3 IP, IPX, and AppleTalk RIPv1/v2, OSPFv2, PIM-DM, DVMRP, IGMPv2, IPX RIP/SAP, RTMP/ZIP/NBP
Full Wire-Speed Classification and Filtering	Traffic Classification and Filtering at Full Speed Based on Layer 2, Layer 3, and Layer 4 Parameters
Other High-Performance Capabilities	Supports up to 1024 VLANs with 802.1Q Tagging and GARP Group VLAN Registration Protocol (GVRP) 802.1d Spanning Tree Multiple VLAN-Based Spanning Tree
Reliability and Redundancy	Hot-Swappable Interface Modules, Management and Switching Modules, Fans and Power Supplies on the DNmultilayer 1800 and 1400 Optional Redundant Management and Switching Modules and Power Supplies on the DNmultilayer 1800 and 1400 VRRP Virtual Router Redundancy Protocol
Priorities and QoS for Voice and Data Traffic	Supports 3 Internal Traffic Priorities 802.1p and DiffServ
Link Aggregation (Trunking)	Complies with 802.3ad Standard Each Trunk Group Supports up to 8 Fast Ethernet, Gigabit Ethernet, and OC-48-Port in any Combination
Load Balancing	Layer 2 Load Balancing Over Multi-Port Trunks Layer 3 Load Balancing via Equal-Cost Multipath Routing (RFC2328) Over LAN/WAN Links
Management	SNMPv1/v2 and 4-Group RMON on all Ports RS-232C and TELNET Console Connections clearVISN Web-Based Configuration and Management

Features & Benefits

DNmultilayer 1400

- 8-Slot chassis with redundant AC or DC power supplies and fans
- 4-Slots for network interface modules
- 4-Slots for primary and redundant management and switching modules
- 12 Mpps forwarding capability
- Supports up to 64 Fast Ethernet or 24 Gigabit Ethernet ports
- LAN/MAN interface modules support 1 OC-48 SONET, 6 1000BASE-T, 2 and 6 1000BASE-SX/LX, 16 10/100BASE-TX, or 8 100BASE-FX ports per slot
- WAN interface modules support 1 ATM OC-3 or 4 V.35/X.21 ports per slot
- Three traffic priority levels assure proper delivery of IP voice traffic
- Unique OC-48 SONET capability for LAN/MAN Ethernet backbone extension
- OC-3 ATM and V.35/X.21 WAN interfaces
- Full redundancy of all components for maximum reliability
- Full wire-speed IP, IPX, and AppleTalk routing
- Full wire-speed Layer 2/3/4 switching
- Complete IP Multicast routing support
- Full wire-speed Layer 3/4 filtering

DNmultilayer 1200 and DNmultilayer 1100

- Stand-alone units with built-in power supply, fans, CPU, and multilayer switching
- Wire speed layer 2/3/4 switching
- 11 Mpps (1200) and 6.6 Mpps (1100) forwarding capability
- Fixed configuration of 32 Fast Ethernet (10/100BASE-TX) ports on DNmultilayer 1200 and 24-Ports DNmultilayer 1100
- Fixed configuration of 2 Gigabit Ethernet (1000BASE-SX) ports
- 2 expansion slots (DNmultilayer 1200) support 1 1000BASE-SX/LX, 2 1000BASE-T, 8 10/100BASE-TX, 4 100BASE-FX, 1 ATM OC-3, or 2 V.35/X.21 additional ports per slot

INTERFACE MODULES

ATTRIBUTES	DNMULTILAYER 1800/1400	DNMULTILAYER 1200
10/100BASE-TX	16-Port	8-Port
100BASE-FX	8-Port	4-Port
1000BASE-SX or -LX	2-Port	1-Port*
1000BASE-T	6-Port	2-Port
1000BASE-X (GBIC-based)	6-Port	—
OC-48 SONET (2-Slot): up to 80k	1-Port	—
ATM OC-3 (155Mbps): IPoA, VC/VP Shaping	1-Port	1-Port
V.35/X.21: up to DS2, IP over PPP, IPSec, VPN	4-Port	2-Port

* 1000BASE-SX only

DNswitch™ 224S **NEW**

High performance stackable switching with a lifetime warranty

The DNswitch 224S is a managed 24-port 10/100 switch that can be used in stand-alone or stacked configurations. Up to six units can be stacked to form a single logical switch with up to 150 ports, providing enough bandwidth for the most demanding environments. It employs a high-speed switching fabric, which allows for simultaneous transport of multiple packets at low latency on all ports, along full-duplex capability on all ports. And it offers an optional 100Mbps fiber module for connecting to a remote site, or a Gigabit module for a high-speed backbone connection.

An RMON/SNMP Web Management Module provides a broad range of management options, providing a standards-compliant SNMP agent and RMON support for Statistics, History,

Alarm, and Event Groups. Network management can be performed in-band using TCP/IP or TELNET connection to the serial console port on the Management Module. This module also includes a built-in Web agent that provides management access via common http browsers. The console port allows out-of-band management using a PC, terminal, or modem connection.

The *clearVISN* Web Management Suite is also supported and can be easily integrated with popular enterprise network management systems on Windows 95, 98, NT, 2000 and UNIX.

Features & Benefits

• Flexibility

- Low Cost Stand-alone/Stackable Switch
- Stack Manageable as a Single Entity
- Meets Connection Requirements: 1000BASE-X and 100BASE-FX

• Management

- Embedded Management
- *clearVISN* Web Management Suite

• Performance

- 8.8 Gbps Switching Fabric
- 6.55 → 39.3 Mpps

Lifetime Warranty

NEW DNswitch™ 248

High performance, industry standard switching with a variety of management options

Features & Benefits

• High Performance

- 16 Gbps Switching Fabric and up to 10 Mpps Forwarding Rate (for 64-byte packet)
- Wire Speed for each 10/100 and 1000BASE Ports
- 12K MAC Addresses, Auto-Negotiation
- Advanced VLAN Support: Up to 256 VLANs
- Latency: Under 10 Microseconds for Minimum Packet Lengths at 100Mbps

• Compatibility

- IEEE 802.1D Bridging/Spanning Tree
- IEEE 802.1Q VLAN Tagging
- IEEE 802.1p Priority Queuing
- IEEE 802.3x Full Duplex Flow Control

• Manageability

- clearVISN Web Management Suite
- On-board Management

• Flexibility

- Highly Competitive Price per Port
- 10/100 and 1000BASE Connectivity
- Redundant Power

Lifetime Warranty

A manageable, stand-alone 48-Port switch, the DNswitch 248 connects workstations and other network devices on networks of all sizes.

Software management for the DNswitch 248 is accomplished with Digital Networks' clearVISN Web Management Suite, which enables control on both a per-port and per-switch basis. clearVISN provides a common interface for Digital Networks' hubs, switches, and routers, and integrates with popular enterprise network management systems on Windows 95, 98, NT, 2000, and UNIX.

On-board management for the DNswitch 248 operates via a Management Module and is accessed either in-band via TELNET or TCP/IP, or out-of-band via the serial console port interface. Local console management can be used to configure a variety of network parameters, as well as to provide statistical and diagnostic information about an individual port or the entire device.

Workgroup Solutions

DNswitch™ 800 **NEW**

Gigabit Ethernet switching with superior performance at very low cost per port

The DNswitch 800 is a stand-alone Gigabit Ethernet switch that delivers superior performance, flexibility, manageability, and reliability all at one of the lowest costs per port on the market. The DNswitch 800 provides 8 1000Base-SX ports and includes an SNMP-based management agent with support for both in-band and out-of-band access for managing the switch. It also supports RMON for Statistics, History, Alarm, and Event Groups. It is easily installed and supports tiered or cascading switches. Other DNswitch family members such as the DNswitch 224S and the DNswitch 248 can be connected to any port on the DNswitch 800 for additional device connectivity.

The DNswitch 800 provides the quickest solution to meet the growing demands of today's small-to-medium sized networks. Each 1000Base-SX port can support connections up to 1800 feet (550 meters), providing high-bandwidth connectivity within or between workgroups, and increased capacity for server farms, giving users faster access to network-wide resources.

ORDERING INFORMATION

PART #	DESCRIPTION	LIST PRICE
DSA8G-SX	DNswitch 800 8-Port GbE Switch, Stand-alone	\$5,995
DRPS1-AA	Redundant Power	\$595

Note: Units are shipped with a US Power Cord; Our EMEA Distributors will add the appropriate country cord.

Features & Benefits

• Performance

- 16 Gbps switching fabric with forwarding rate of 12 Mpps
- 8K MAC address table
- 1 MB packet buffering per port
- Full duplex on all ports
- Auto-negotiation
- Advanced VLAN support for up to 256 VLANs

• Reliability

- 1000BASE-SX connectivity using SC multimode fiber optic connectors
- Port mirroring for network traffic analysis and connection integrity
- Port trunking: up to 4-Port trunks per switch
- Redundant Power

• Compatibility

- IEEE 802.1D Bridging/Spanning Tree
- IEEE 802.1p Priority Queuing
- IEEE 802.1Q VLAN Tagging
- IEEE 802.2 Local Area Networks, Logical Link Control (LLC)
- IEEE 802.3 CSMA/CD
- IEEE 802.3z 1000Base-SX
- IEEE 802.3x Flow Control
- EIA RS-232C (DTE-to-DTE)
- EIA RS-310C (19" Rackmount)

• Manageability

- clearVISN Web Management Suite
- On-board management

• Highly competitive price per port

Lifetime Warranty

www.digitalnetworks.net/dr/npg/dn800.html

GIGAswitch™ /FDDI

For high-performance computing and high-performance network backbones

Features & Benefits

Performance

- Reduces bottlenecks for multi-technology backbones with support for full-duplex FDDI, Fast Ethernet, and ATM
- Increases performance and reduces latency with optional IP packet switching, allowing for more efficient use of routers for firewalls and WAN access
- Reduces the cost of entry for high-performance switching with 2-port or 4-port packaged systems
- Protects investments with support for Fast Ethernet LANs and seamless growth from FDDI to multiple technologies

This multi-layer, multi-technology switch delivers industry-leading performance with nearly boundless scalability. The GIGAswitch/FDDI is the only FDDI switch that uses a crossbar switching fabric to handle the demands of multi-technology backbones, supporting FDDI, Fast Ethernet, and ATM technologies. It delivers plenty of bandwidth for network backbones, workstation farms, high-performance workgroups, disaster recovery/remote backup, and more.

Designed for the demands of the backbone

Hot-swap capabilities and optional redundancy are available for primary hardware components. Dual, mirrored GIGAswitch/FDDI systems can be configured for absolute fail-safe operation. This system is built to support mission-critical applications, online transaction processing, or disaster-recovery schemes.

Easy to manage

Using Digital Networks' *clearVISN* MultiChassis Manager, the network administrator can graphically configure ports and hunt groups, assign virtual workgroups, and manage adds, moves, or changes all from a single PC or UNIX workstation.

Backbone Solutions

MultiSwitch™ 900 Product Family

Multigigabit switching across all technologies

This flexible, multigigabit switching system delivers a broad range of network solutions—from simple shared LAN connectivity to high-speed multi-technology switching. Its unique software-definable backplane provides a high performance, distributed switching fabric for the seamless integration of Ethernet, Fast Ethernet, Gigabit Ethernet, FDDI and ATM, as well as WAN technologies and Access Servers. The MultiSwitch 900 also supports three 400Mbps backplane channels that enable any-technology to any-technology switching.

The MultiSwitch 900 has two chassis, both of which offer the same high performance capabilities.

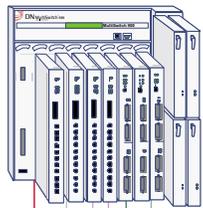

Features & Benefits

- Multi-technology backplane supporting Ethernet, Fast Ethernet, FDDI, ATM, and 400Mbps VNbus
- Firmware upgradeable allowing support for the latest technology and LAN support without concern for obsolescence
- Hot swappable, full N+1 power system maximizes uptime for your network
- Web-based manageability through clearVISN

MULTISWITCH 900 8 AND 4-SLOT COMPARISON

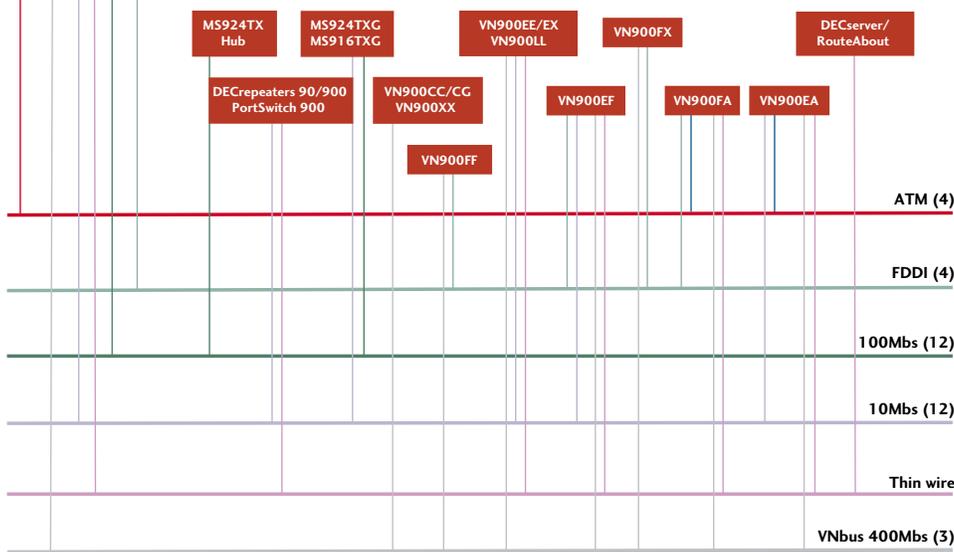

ATTRIBUTES	MS900 MODULES	DECHUB 90 MODULES	10 MBS	100 MBS	FDDI	ATM	VNbus
8-Slot Chassis							
4-Slot Chassis							

MultiSwitch 900 Backplane Connectivity Matrix (Web-based Management using clearVISN)

The MultiSwitch 900 backplane was designed for true investment protection. With its unique open technology, 5.6 Gbps distributed switching fabric, the Digital Networks MultiSwitch 900 system provides support for both packet and cell-based technologies. And thanks to a software-definable, multitechnology backplane, all it takes is a simple click of the mouse to reconfigure a network adding 10 or 100Mbps Ethernet channels along side FDDI, ATM, or VNbus LANs.

Since the backplane supports a wide variety of shared hub, switches, access server and routing products, it is also easy to migrate from shared to switched networking without compromise or complications. In fact, all existing Digital Networks 90/900 series products are fully supported by the MultiSwitch 900 system as shown in the diagram.

See it on the web at:
www.digitalnetworks.net/dr/npg/dmhub-mn.html

MultiSwitch™ Fast Ethernet 924TXG MultiSwitch™ Fast Ethernet 916TXG

High-density switched Fast Ethernet with Gigabit uplinks

Features & Benefits

MS924TXG

- 24 10/100 Ethernet ports (RJ45)
- 1 modular Gigabit Ethernet port
- MultiSwitch 900 Fast Ethernet backplane support
- 4.2 Gbps internal switching fabric
- IEEE 802.1Q/p compliant
- Port Trunking

MS916TXG

- 16 10/100 Ethernet ports (RJ45)
- 2 modular Gigabit Ethernet ports
- MultiSwitch 900 Fast Ethernet backplane support
- 4.2 Gbps internal switching fabric
- IEEE 802.1Q/p compliant

The MultiSwitch 924TXG and MultiSwitch 916TXG bring high-density switched Fast Ethernet with Gigabit Ethernet uplinks to the MultiSwitch 900 platform. Using the 12 Fast Ethernet channels across the MultiSwitch 900 backplane, the MultiSwitch 924TXG and MultiSwitch 916TXG enable MultiSwitch 900 users to allocate bandwidth among existing Ethernet and Fast Ethernet repeaters and

port switches. Both switches offer industry-standard VLAN and priority queuing support.

As with all MultiSwitch 900 modules, both switches can be used as a stand-alone with the DEChub ONE or modular in either the 8- or 4-Slot MultiSwitch 900 chassis. Web-based management is provided via *clearVISN*.

Wiring Closet Solutions

VNswitch™ 900 Product Family

High performance, multi-technology switching

The VNswitch 900 product family of multi-layer, multi-technology enterprise-class switches is designed to provide layer 2 switching and layer 3 IP routing to the wiring closet. When combined with the MultiSwitch 900 chassis, multiple VNswitch 900s can be connected together by one of three 400mbs

backplane channels called the VNbus. The VNbus provides a non-blocking, very low latency, multi-gigabit distributed switching fabric across the MS900 backplane, which delivers maximum data throughput across multiple technologies.

Features & Benefits

- Provides seamless technology migration and integration across Ethernet, Fast Ethernet, FDDI, ATM, and Gigabit Ethernet
- Layer 3 IP routing and line rate layer 2 switching regardless of technology
- Maximizes network configuration flexibility by supporting a wide variety of modular cable media options for Fast Ethernet, ATM, FDDI, and Gigabit Ethernet
- Supports chassis-based and stand-alone configurations using either the 8 and 4-Slot chassis or the DEChub ONE

NEW DECswitch™ 90

Fast Ethernet switching for the DEChub 90 chassis

Features & Benefits

• Performance

- 3.2 Gbps Switching Fabric with a Forwarding Rate of 2.3 Mpps
- Full Wire Speed Packet Forwarding
- Supports up to 8,000 MAC Addresses
- Store and Forward Architecture Prevents Bad Frames from Traversing the Network and using up Valuable Network Bandwidth

• Monitoring

- Provides Two LEDs Per Port: One for Link & Activity; another for Full Duplex/Half Duplex
- Provides LEDs for Power OK and Module OK

• Compatibility

- 802.1p Priority Queuing
- 802.3u Auto-Negotiation
- 802.1D Bridging
- 802.3 Compliant
- 802.3X Flow Control

• Investment Protection

- Go from 10Mbps to 100Mbps without Removing the DEChub 90 Chassis, Changing Cabling, or Rewrite Existing Ethernet Applications

The DECswitch 90 is the ideal solution to alleviate contention for network resources—and put an end to bottlenecks. This scalable, flexible Fast Ethernet switch enables organizations to incrementally expand both the number of ports and the speed of the network as business growth and new networking applications demand—while utilizing the existing platform.

The DECswitch 90 brings 16-Port of unmanaged, Fast Ethernet switching to the DEChub 90 shared platform. This maximizes the value of investments in existing DEChub 90 installations, while providing improved service to LAN users—

all at a reasonable cost. This flexible switch enables businesses to incrementally grow both the number of ports and the speed of the network as network requirements dictate, while utilizing the existing platform.

In addition to the DEChub 90 chassis, the DECswitch 90 can be used the MultiSwitch 900TM backplane or with the MultiStack System Stacking Unit for stand-alone and stacked configurations. The unit is fully operational at power up.

Workgroup Solutions

DEChub™ 90

Stackable, hub-based workgroup solution

Features & Benefits

- Plug-and-play functionality
- Hot-swappable module replacement
- Higher throughput without a common single point of failure by eliminating the central processor
- Simple, graphical SNMP management
- A rich variety of module functionality, including repeater and bridge fiber-optic support and wide area routing

The DEChub 90 workgroup chassis is the industry's only stackable and hub-based solution in one product. It is designed to support the communication needs of today's workgroups in small to mid-sized companies, and expanding communication needs in corporate enterprise networks.

Built as a multi-functional Ethernet-based backplane, the DEChub 90 chassis provides

mounting, power, and ThinWire Ethernet backbone connections to accommodate up to eight Digital Networks 90-series modules. This family of modules includes a variety of Digital Networks repeaters, access servers, bridges, wide area routers, and an SNMP management module. Each of these hot-swappable modules can be configured for use as a stand-alone device, a stackable in the MultiStack System, or a module in the DEChub 90 chassis.

ORDERING INFORMATION

PART #	DESCRIPTION	LIST PRICE
DEHUB-B*	DEChub 90 Chassis - Includes Power Supply, Rackmount Brackets, Documentation and One ThinWire Cable. Note: For Central Europe Variant, Order DEHUB-CB	\$790

FDDIcontroller/PCI Adapters

Optimized for high throughput performance,
even in heavy network traffic

Features & Benefits

- **Performance**

- High-performance, Low-Latency DMA Chip Supports High Throughput and Low CPU Utilization
- On-board CPU for SMT Processing
- 1 MB Buffer RAM
- Full-Duplex Capability

- **Easy to Install and Use**

- **SNMP Manageable**
- **Full Suite of Software Drivers**
- **Variety of Platforms**

Three-Year Warranty

The Digital Networks FDDI controller/PCI adapters are ideal for heavily used FDDI networks. These 32-bit adapters feature an on-board CPU, DMA chip, and 1 MB buffer to support demanding high-bandwidth applications such as video, file transfer, and system backup operations – without taxing systems. Full-duplex capability extends bandwidth up to 200 Mb/s.

These adapters are designed to work with a variety of platforms and are easy to install and use. They have undergone extensive interoperability and standards testing and are backed by a three-year warranty.

ORDERING INFORMATION

PART #	DESCRIPTION	LIST PRICE
DEFPA-AC	FDDIcontroller/PCI – SAS MMF Model	\$1,195
DEFPA-DC	FDDIcontroller/PCI – DAS MMF Model	\$1,695
DEFPA-MC	FDDIcontroller/PCI – DAS UTP Model	\$995
DEFPA-UC	FDDIcontroller/PCI – SAS UTP Model	\$695

DECconnect Systems Interconnect Products

Variety and reliability from the backbone to the desktop
supporting the connection of Digital Networks products

Features & Benefits

- **Mixed media support**
- **High density**
- **Designer look**
- **Flexible installation configurations**
- **Easy access**
- **Uses existing components**

Standards-based: DECconnect interconnect products are rigorously tested at the component and systems level to support your hardware investment.

The products include Gigabit, ATM, FDDI, and Fast Ethernet-ready equipment cables supporting both twisted pair and fiber optic media. All are designed and manufactured to the highest quality for trouble free connections at the backbone and the desktop.

The Digital Networks Multimedia Outlet (MMO) is the reliable way to connect multiple users and services within a work

group or office cluster. It is the ideal solution for users in a classroom or lab environment, providing flexible support of up to 12 independent communications ports.

See them on the web at:
www.digitalnetworks.net/dr/npg/wiring_connectivity/DECconnect_components.pdf

Workgroup Solutions

DECserver™ Family

Multi-protocol asynchronous device servers

The DECserver family of asynchronous device servers connects terminals, printers, modems, bar-code readers, scanners, cash registers, laboratory instruments, numerically controlled factory equipment, or system console ports to an Ethernet network. The DECserver family includes models with a range of features and performance to meet the needs of most applications, including factory and laboratory automation, retail point-of-sale, telecommuting, legacy terminal-to-host, and console port management.

The DECserver family includes the 8-Port DECserver 90M, 8-Port DECserver 700-08, 16-Port DECserver 700-16, the 32-Port DECserver 732, and the 32-Port DECserver 900TM. A variety of configuration options are supported, including Stand-alone, Rackmount, or mounting in the DEChub 90 or MultiSwitch 900 backplanes. All DECserver models include Network Access Software CD-ROM with firmware, documentation, and utilities files.

Features & Benefits

- Multi-protocol support for IP, IPX, and AppleTalk networks
- Models available with 8 to 32-Port for Stand-alone, DEChub, or rack-mount environments
- Asynchronous port speeds to 115.2Kbps for performance-intensive asynchronous applications
- LAT, TELNET, Rlogin, TN3270, and DNS support for terminal-to-host connections
- Reverse LAT, LPD, TELNET listener/server, raw TCP listener/server for serial printing and device serving
- PPP, CSLIP, and SLIP to connect legacy IP clients and support asynchronous WAN connections
- Innovative AUTOLINK software detects the type of remote access connection request and automatically reconfigures ports on the fly
- Wide array of authentication features including PAP, CHAP, RADIUS, Kerberos V4, RSA SecurID, and CBCP or standard dial-back
- DHCP and WINS Auto-configure provide automatic and reliable distribution of IP addresses
- FLASH RAM allows DECserver operating software to be stored onboard in non-volatile, upgradeable memory—no network load host is required when configured with FLASH

ORDERING INFORMATION

PART #	DESCRIPTION	LIST PRICE
DSRVH-RA	DECserver 90M Access Server with 2MB FLASH (Stand-alone)	\$1,527

DSRVW-KA	DECserver 732 No FLASH	\$3,095
DSRVW-KC	DECserver 732 with FLASH Card	\$3,395

* -03 denotes cable length in meters. Other lengths are available.

Special Cost-Saving Features

Inactivity Timers control telecommunications costs by tracking per-port data traffic activity and tearing down connections that exceed configured thresholds. In addition, a TCP Keepalive Timer saves line costs and improves server availability by continually probing remote host activity and disengaging them if no activity is detected.

RADIUS Server Utility

The bundled RADIUS server utility provides time-of-day and session authorization services, further controlling actions of authenticated users on the network. In addition, RADIUS accounting tracks user activity, providing audit trails and data for reports.

Device-to-Host-Support

Device-to-host connections are supported for TCP/IP, LAT, and PC-based networks. For TCP/IP, both Telnet Listener and raw TCP listener options are available. The raw TCP listener option eliminates the TELNET protocol layer overhead. For VMS or other environments where the LAT protocol is used, reverse LAT is supported. For PC-based networks, “COM Port redirectors” can create large arrays of “virtual COM ports” on a single PC. The “virtual COM ports” are used to tunnel serial data over an Ethernet network installed between the PC application and the remote device.

Management

Management support is provided via Access Server Manager (ASM)—a Windows-based graphical user interface—the DECserver command line interface, or SNMP and *clearVISN*.

clearVISN™ Management Suite

Web-based device management to eliminate downtime

clearVISN is the most comprehensive device management suite available for Digital Networks devices. This integrated set of applications uses a common device database and a common look and feel to reduce setup time and training costs. clearVISN puts high-level network control at the user's fingertips—simplifying configuration and management of complex devices and technologies, while delivering a clear picture of vital network data.

Using a policy-based approach, clearVISN allows management of the network as a whole, rather than one device at a time, providing abstracted views of real-time configuration, enabling proactive problem resolution. It is the ideal way to reduce the cost of network ownership while increasing network availability.

clearVISN is extraordinarily powerful, yet easy to implement. It provides device management support for a wide range of MultiSwitch 900 devices, including the MultiSwitch 916TXG and 924TXG, the VNswitch 900CC, 900CG, and 900GV, as well as the DNswitch 224S, DNswitch 248, and DNswitch 800.

Workgroup Management

For most workgroup environments choose the MultiChassis Manager, clearVISN Flash Loader, clearVISN Recovery Manager, and clearVISN Router Configurator. These graphical tools are the perfect way to manage the suite of Digital Networks' workgroup products.

Site Management

To manage a site network, the clearVISN Fault Policy Manager uses the same intuitive interface that's used for Digital Networks workgroup solutions. Combined with the clearVISN MultiChassis Manager, this is the perfect way to manage all Digital Networks products. In addition, clearVISN Traffic Policy Manager can be used to optimize existing bandwidth on MultiSwitch 900 and PORTswitch modules.

Campus Management

Configure campus networks with clearVISN VLAN Manager, a powerful tool that sets up VLANs on switches.

Features & Benefits

Performance

- Enables network device management from anywhere using common web browsers
- Simplifies moves, adds and changes with graphical, point-and-click interface from a PC or UNIX workstation
- Distributed intelligent agents move fault monitoring to network devices, reducing polling overhead and improved response time
- Provides abstracted views of real-time and historical network intelligence, to address issues proactively, rather than reactively

Web-based Device Management

Global DNservices

Knowledge and experience to maximize network performance and availability

Features & Benefits

- Simplified network operations by streamlining network management, while ensuring optimal performance and availability
- Improved network availability through expert planning and implementation of Digital Networks and third-party products
- LAN/WAN technology solutions and tiered service offerings to achieve the lowest cost of ownership in the industry
- Increased flexibility and scalability with comprehensive support to augment in-house capabilities
- Investment protection gained from the insights and innovation of a world-class service organization

Building on our 25-year heritage as a networking innovator, Digital Networks offers a broad portfolio of services—available through our global team of authorized resellers—to maximize the value of an enterprise's network investments.

Global DNservices are the key to minimizing cost of ownership, ensuring the highest levels of network availability and scalability, and protecting network investments over the long term. Digital Networks provides a full range of services, from installation and warranty services, to telephone assistance and parts replacement, to on-site maintenance and software support. It's one-stop shopping for a complete service solution.

Installation Services

Digital Networks provides a variety of installation services, ranging from design and implementation, to network verification and review support. We also offer help in customizing and building turnkey solutions, or special assistance in wiring, moving, reconfiguring, de-installing, or correcting faulty equipment.

Enhanced Warranty Service

This service provides a cost-effective way to obtain replacement parts, while allowing the enterprise to use its own internal technical personnel for maintenance and service.

SafetyNet Services

Digital Networks SafetyNet Services offer technical phone support with a variety of response times and coverage plans to meet specific network availability objectives.

On-site Maintenance Service

This service provides vendor-qualified and certified technical experts on-site to augment internal staff when needed, with up to 24 x 7 response.

Technical Support Hardware "Call Packs" Service

For technical phone support to assist internal staff, Digital Networks offers Technical Support Hardware

"Call Packs" Service, which includes up to 10 calls for remedial phone support and 24 x 7 access to a Digital Networks Authorized Service Provider's electronic service bulletin board.

clearVISN Software Maintenance Service

The *clearVISN* Software Maintenance Service provides 24 x 7 phone access to *clearVISN* technical support personnel, formal maintenance and major software releases, and 24 x 7 access to a Digital Networks Authorized Service Provider's electronic service bulletin board.

Support Services

Comprehensive, easily accessible support for customers and partners

Trade-In Program

You can now trade in any of your network products for credit!!!

Everything is eligible, regardless of the manufacturer. This new Trade-In Program gives you an easy and quick way to turn all of your networking products into credit towards new Digital Networks LAN/WAN/MAN and Gigabit backbone solutions.

The time to Upgrade is NOW!

- > All your old legacy networking equipment is eligible
- > Easy trade-in application process with NO obligation
- > Timely 48-hour response
- > Expert assistance from our trade-in representatives
- > Savings on your next purchase

Go online at

www.digitalnetworks.net/tradein
